

# fleur™ & veranda™

## IMPORTANT UNPACKING INSTRUCTIONS

Dear Customer:

Thank you for ordering your lighting from Studio Steel.

We have implemented significant quality control procedures to ensure your Studio Steel Fleur or Veranda Chandelier is carefully packed and shipped complete.

However it is VERY IMPORTANT to un-pack it according to the following instructions, step by step, to avoid damaging the more delicate areas of your new fixture.

### STEP-BY-STEP INSTRUCTIONS:

1. Open the box from the top and remove the packing material.
2. Remove cardboard over base of chandelier.
3. Remove the chandelier carefully, keeping the plastic protective wrap on.
4. All arms are locked in position to one side for shipping and should be loosened using the hex key at the bottom of this page.
5. Each arm should be positioned perpendicular to the center shaft so that it is opposite it's counterpart on the other side.
6. On each tier the arms are 90° from each other. In other words, each tier forms an "X".
7. If chandelier hangs crooked, then the arms need repositioning. Look at the piece from underneath to determine if each tier forms an "X" and that each tier is between the other.
8. Position the arms and carefully tighten the set screw in the collet. **DO NOT OVER TIGHTEN!**
9. Each bottom pendant is hand forged and unique. It usually fits on best - one particular way, so turn it around until finding the best fit and put on the hand forged nut to tighten.
10. Installation must be performed by a qualified electrician. A grounding wire is provided in the main line cord. The smooth wire is the black (HOT) wire, and the ribbed wire is the white (NEUTRAL) wire. The green wire is the ground.
